

# Corabit Seam adhesive

## GENERAL INFORMATION

**Corabit seam adhesive** is a cold applied bituminous, polymer-modified sealant for the permanent bonding of seams in the installation of hot asphalt mixture.

- is applicable without primer
- thixotropic set, has got at a good stability at application
- bridges tensile forces can be applied mechanically, by using a brush or a spatula

## APPLICATION INSTRUCTION

The seam areas of the asphalt layers must be extensively dry, clean and free of frost. Loose particles have to be removed.

The appropriately prepared seam edge is coated with **Corabit seam adhesive** to a thickness of approx. 2-3 mm.

The drying time of the seam bonding agent depends on the weather conditions. The application of the hot asphalt mixture can take place after approx. 30 min. and should be preferably applied on the same day.

Pollutions of the **Corabit seam adhesive** should be avoided until the application of the hot asphalt.

The coated surface **must not** be driven on.

## FORMS OF DELIVERY

### **Corabit seam adhesive:**

Hobbocks                      25 kg  
Hobbocks per pallet      12 units

## CONSUMPTION

The consumption depends on the open pores of the asphalt and the flank height. It is approx. 80 g/m for a flank height of 40 mm.
